Ultra-Oil Blanket®

Part# 5206 (Complete Unit) and 5207 (Replacement Blanket Only)

FEATURES & BENEFITS

+ Install in the surf along beaches and shorelines to absorb oil spills before they can make it to land.
+ Large, 10'-long x 5'-wide section of Ultra-Filter-Tex quickly removes oil and other hydrocarbons.
+ Blanket will "tumble" in the surf and remove oil from water as it passes by and thru the filtering fabric.
+ Ultra-Filter-Tex has the unusual benefit of being able to pull out emulsified oils which are created in the pounding surf as well as by dispersants used on the oil slicks offshore.

INSTRUCTIONS

1. The Ultra-Oil Blanket is a large 10-foot x 5-foot blanket made of Ultra-Filter-Tex fabric that captures surface and subsurface oil before it reaches the shore.

2. The Ultra-Oil Blanket (Part# 5206) comes with two wooden stakes to anchor the blanket to the shore line and approximately 25-feet of rope per stake.

3. Simply insert the stakes on the shore line and adjust the length of the rope by loosening the slipknot on each stake. Re-tie the rope to the stake when it has been adjusted to the appropriate length.

4. The Ultra-Oil Blanket will "tumble" in the surf and remove oil from water as it passes by and through the filter fabric.

5. Each Ultra-Oil Blanket is capable of absorbing up to 3.9 gallons of oil.
