

Asset Protection

Gentoo is the next gen corrosion-resistant and easy-clean coating that can hold up to the toughest environments. With its combination of high-performing abrasion resistance, low sliding angle, and water repellancy, Gentoo excels where other coatings fall short. All while maintaining its clear transparency, making it an unparalleled tool for asset protection.

Corrosion Resistance

Gentoo is a sol-gel technology, which revolutionizes corrosion control and protection. During and shortly after its development, UltraTech International and its partners conducted in-depth testing to certify Gentoo's key attributes both in the lab and in the field, including with the United States Air Force (USAF).

Easy Cleaning

The low sliding angle combined with the high dirt and solvent resistance of the coating allows for easy cleaning of all different types of equipment - from bulldozers and trains to pumps and tanks - preventing water, oil, dirt, mud, grime, and more from adhering to the surface. This lowers the time and money spent on maintenance.

Renew and Protect

Gentoo renews oxidized paint, while protecting it from abrasion and harsh environments. And since Gentoo can be sprayed on, it protects every nook and cranny—not just flat surfaces. This is useful for protecting complex equipment and machinery.
