Web-site address: spillcontainment.com

Description of the product: (Include specific quantifiable details from tech data sheet. Advertising generalities are not appropriate.)

Ultra-Grate Guard is a temporary catch basin filter made from High Flow Geotextile Fabric that removes sediment, trash and debris from entering a catch basin. Ultra-Grate Guard can be custom ordered to fit the combination grate size for the project, sizes include 30" x 40", 30" x 90", and 30"x140" . Models can be made for sediment control only, or for oil removal and sediment control.  
  
The unit slides over the storm grate like an envelope and the grate is placed back in the frame recess. The built in lift straps make removal and replacement of the grate an easy process.

Restrictions, (installation and/or use):  
The Ultra-Grate Guard will function properly only when the product is installed and maintained as recommended by UltraTech International

Use of the product, and Benefit to CDOT (be specific to CDOT highway activities only):  
The Ultra-Grate Guard keeps debris, silt, sediment, and (with Oil and sediment models) oil out of storm systems. The Ultra-Grate Guard drastically reduces the need to flush or routinely clean inlet. This product is easy to install, maintain and inspect. Sizes can be built to fit any inlet.

Specifications: (listing those applicable is required)

- CDOT : 208.02(o)
- ASTM :
- AASHTO :
- FHWA :
- other :
- Certificate of Compliance (COC) provided  Certificate of Verification (COV) provided for select categories
