

Ultra-Track Pans

Advantages of Track Pans vs Competitive Products

- + **Easy Installation:** Lightweight, smaller Pans are very easy to move around and install without heavy equipment
- + **Chemical Resistance:** Polyethylene construction has excellent chemical resistance - better than metal and other materials.
- + **Patented Gasket System:** Seals against the rail eliminating a potentially large leak point.
- + **Grating is Included:** All Pans come with grates as part of the design/integrity for walking on or setting up drive over points. Personnel do not have to walk in spilled product in Pans due to grating in every pan, reducing liability.
- + **Modular:** If something gets damaged, only a small section will need to be replaced.
- + **Patented Horizontal Flow:** Flow-Through Channels and bulkhead fittings allow spills to travel from Pan to Pan. Track pans, of all kinds, have limited capacity, so routing a spill sideways and then through below-grade piping is very critical.
- + **Multiple Drain Capacity:** Track Pans are designed so they can accommodate multiple drains in as many Pans sections as desired.
- + **Crude Oil Applications:** Viton gaskets available for installations in crude oil loading/off-loading areas.
- + **Longevity:** Estimated 20-30 year work life.
