

EVERSHIELD GLOVES

Private Label Program

Superhydrophobic gloves that last longer, repel liquids, and provide greater safety and comfort

UltraTech International, Inc. and its Advanced Technology Group (ATG) developed EverShield fabric protection back in 2016 for the U.S. Army. Since then, EverShield has become a proven, durable omni-repellant (DOR) for use in many applications where water, oil, and other liquids need to be repelled.

All EverShield Gloves are:

- + Breathable
- + Longer lasting as they will not get as dirty or wet and thrown away prematurely
- + More comfortable for workers to wear, helps keep their hands clean, drier and free from contamination/liquids
- + Repellent treatment is permanent and will perform over the life of the glove
- + Safer to use as the glove is not as wet and slippery, offers a better grip
- + Variety of sizes and styles for most industrial applications

** EverShield Gloves are not "liquid-proof" like a membrane, but their repellency will be effective for most applications.*
