Ultra-Gravel Bag®

Heavy-duty bags provide quick and easy sediment and erosion control

Some may consider gravel bags to be “old school” but in some applications, they are an excellent solution. To say that gravel bags have come along way over the years may be an overstatement but to say that they are the same now as they were on day 1 would be selling them short. At least when describing Ultra-Gravel Bags.

UltraTech’s bags are made from heavy-duty geotextile material with a high UV rating so they’re designed for years of outdoor exposure.

All Ultra-Gravel Bags are sold empty so they’re easy to get onsite. Fill them with sand, gravel or other aggregates to create quick and versatile erosion control.

Product Highlights

+ Gravel bags are a basic BMP (Best Management Practice) used to meet regulatory requirements for stormwater and erosion control.
+ Made of very high quality polymer material that is woven into shape - eliminates the flaws and failures of sewn edges.
+ High UV rating allows multi-year life in sun and elements.
+ Rugged material and construction can, in most instances, withstand being driven-over, a typical problem with lesser bags.
